# THE MAGNUSON GROUP ENVIRONMENTAL STATEMENT

## MANUFACTURING PRACTICES

### Manufacturing Process

The manufacturing process with Slope starts with partially recycled steel. The cold rolled carbon steel is formed and given a paint color with a low emitting powder coating.

All steel is sourced locally, within 95 miles of Magnuson Group's headquarters in Woodridge, IL, where final assembly occurs. Magnuson Group's vendors are carefully selected based on craftsmanship, location and environmental practices among other considerations

## MAINTENANCE & USE & DISPOSAL

### Cleaning

Slope can be cleaned using a damp cloth and mild non-abrasive cleaner.

### Ergonomic

Product is designed for ergonomic use, which will continue to service life.

### Recycling

At the end of it's life cycle, Slope can be disassembled and recycled. The body is made primarily of steel, one of the most recycled materials on the planet, and the internal rigid liner is made of plastic, which is also easily recyclable. Receptacle is designed to maximixe recycling rates through design, graphics, and signage placement.

ADDITIONAL NOTES

SOTARE half elliptical units receive two labels per unit. SOTARE quarter elliptical units receive one label per unit.

SOTARE units can also be configured with our Valuta family of receptacles.

Use magnets (model GNG-MAG-2; containing 2 magnets) to gang VALUTA/SOTARE units together. For each point of contact between adjacent units being ganged together, 2 magnets are required. For example, ganging 2 SOTARE units together would require 1 pair of ganging magnets.

Place ganging magnets on the inside steel walls of each adjacent unit by removing the internal liners. Position the units together with magnets facing each other to create the greatest pull.

Use magnets (model GNG-MAG-2; containing 2 magnets) to gang VALUTA/SOTARE units together. For each point of contact between adjacent units being ganged together, 2 magnets are required. For example, ganging 3 VALUTA units together would require 2 pairs of ganging magnets.

VALUTA units can also be configured with our SOTARE family of receptacles.

All 20" tall ("M" models) and 36" tall ("H" models) Kaskad planters include 14 1/2" x 26 1/2" polybag(s) that can be filled with pea gravel to add ballast as required, depending on the specific situation [i.e., when using dense/tall plant material, where the units are situated, etc.]. Each polybag, if filled to 50% full with pea gravel, will add approximately 25 pounds of weight to the base. If additional stability is required, floor anchors can be provided upon request for no charge (hardware not included).

All 36" high Kaskad units are shipped to you completely assembled with adjustable glides in place on the base. Also included in the carton are two stabilizer bases that can be used in place of the adjustable glides for additional stability when the units are placed in open areas.

Kaskad's fully enclosed watertight internal liner is 7 3/4" deep and can be removed if it is not being used to contain the plants.

KAS-0936 units and KAS-1836 units utilize two separate internal liners for plants.

TSCA Title VI Compliant.

Standard base feet & caster base assembly feet make the unit 18" deep. KP+ screen frame is 1" deep.

Determine the required number of caster assemblies by adding together the total number of connection points + 2 (one for each end). For example, if 3 units are to be joined together, 4 total caster assemblies are required - 2 connection points + 2 (1 for each end) = 4 caster assemblies required. If a single, standalone unit is to be used on casters, 2 caster assemblies are required, one for each end.

Any fabric from the Guilford of Maine Anchorage Collection is compatible with KP+ Space Dividers.

Sample chips and fabric samples available.
